

Broward County, Florida's I-595 design-build project is scheduled for completion in 2013.

GLF Constructs 17 Structures in I-595 PPP Improvement Project

At US\$ 1.2 billion, the I-595 Public Private Partnership (PPP) Project in Broward County, Florida, is the largest single transportation project ever undertaken in the state. GLF Construction Corporation participated with Dragados-USA to procure the project and currently is

constructing 17 structures on the job. The design build finance project began in early 2009 and is on schedule to complete in late 2013.

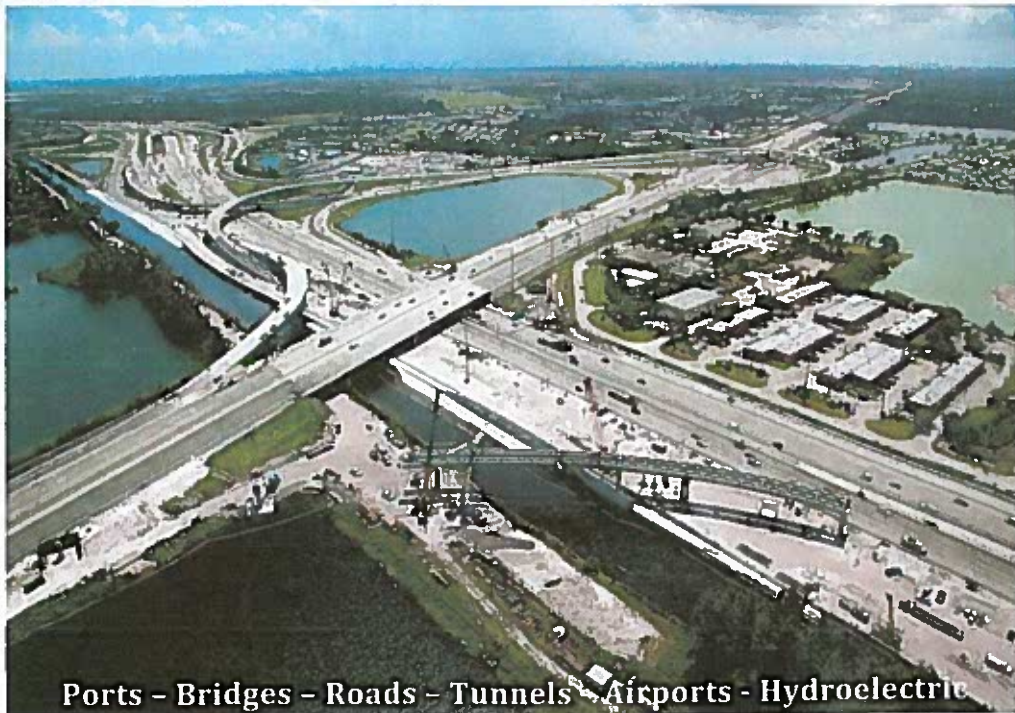

GLF USA has specialized in marine and heavy civil construction in the United States since 1993. As a result, the firm is well positioned to offer its services in all the Americas and the Caribbean.

Currently, GLF is working for the National Energy Corporation to design and construct new port facilities at Galeota, near the village of Guayaguayare at the southern tip of Trinidad. The existing facilities are obsolete and not capable of supporting the requirements of all the various oil and gas companies operating the offshore platforms. The new facilities will support BP (formerly British Petroleum) to expand the level of service to such offshore activities. Additionally, it will provide a permanent facility for the Coast Guard as well as a fishing port for the local residents.

GLF's parent company, Grandi Lavori Fincosit SpA (www.glf.it) of Rome, Italy, is an internationally renowned marine contractor operating throughout the world with more than 100 years of seasoned experience supported by superior in-house technical expertise. ■
